

Gexpro Services
9500 N. Royal Lane, Suite 130
Irving, TX 75063

November 30, 2020

Dear Valued Customer,

Gexpro Services remains committed in doing everything within our control to maintain a robust and full supply chain capable of supporting our customer demands through these fluid times. First and foremost, we are focused on the health and safety of our employees, customers, and suppliers. Gexpro Services has implemented several temporary policy changes that include suspension of business travel, restriction of visitors at our sites, telework for non-essential employees, and implementation of site industrial hygiene protocols and symptom checks to mitigate the associated risks of COVID-19.

Gexpro Services has reviewed and continues to monitor national, state, and local Executive Orders and United States Government guidance related to the COVID-19 pandemic. As indicated in the United States Department of Homeland Security's Cyber and Infrastructure Security Agency ("CISA") August 18, 2020 publication, Guidance on the Essential Critical Infrastructure Workforce: Ensuring Community and National Resilience in COVID-19 Response Version 4.0 (updating the April 17, 2020 Version 3.0, the March 28, 2020 Version 2.0 and the March 19, 2020 Version 1.0), CISA defines workers needed to maintain the continuity of critical manufacturing functions and their associated supply chains as essential workers. Gexpro Services, in the performance of its production inventory management systems and supply chain services, supports critical manufacturing infrastructure business sectors that include medical, transportation, energy, communications, food & agriculture, and the defense industrial base. Therefore, per CISA's Guidance, Gexpro Services' supply chain services business is deemed an essential critical infrastructure business, and its employees supporting these functions are exempt from national, state, or local mandates to shelter in place or stay at home or other similar restrictions, in the performance of its business activities. As the stay at home orders expire, we only allow non-essential employees to return to the office with a defined business need, advance approval, and compliance to the same site industrial hygiene protocols as essential employees.

Since the end of January, we have been diligently working with key suppliers to evaluate impact at the factories in our global supply chain. We are also continuously evaluating any constraint on intra-country logistics, ocean shipping lanes, and air cargo as these restrictions can impact shipments in the affected regions. Below is a summary of the current supply chain impacts and status of our key supplier partners:

- Gexpro Services Sub-Supplier's Current Production Rate in Impacted Regions:
 - Asia – 100%
 - Europe – 100%
 - Middle East – 100%
 - US – 100%
- Global Ocean Logistics – Vessel space allocation has not been an issue for Gexpro Services as we have negotiated space on select trade lanes, where variation of one to two weeks can be accommodated. Urgent sailings can be secured for 15-40% premiums. Overall transit times have extended two to four weeks due to labor shortages, extreme congestion, and a lack of equipment to move containers at US ports.

- Global Air Logistics – Strained due to limited commercial flights to/from US. Costs are 3-5X higher than normal and transit times extended.
- Product Costs & Lead Time Extension – A weakening US Dollar, coupled with raw material price escalations has led to an increase in product costs, specifically out of Taiwan and China. Depending on the product type, material composition, and country of origin, product costs are increasing by 4-10%. As countries across the world emerge from lockdowns, demand for products has skyrocketed and factories are at capacity. Manufacturing lead times have extended 30-45 days. Gexpro Services is factoring the lead time extensions in its planning to minimize disruptions in the supply chain.

In collaboration with our account managers and customers, we have prioritized critical items and maintained delivery schedules by working together with each customer to evaluate stock levels and upcoming forecasted demands. As any potential disruption is identified, we are using reasonable endeavours to recommend alternate expedited shipping methods, manufacturers or comparable parts, if necessary, that will keep any additional costs related to mitigating the disruption reasonable for our customers.

This continues to be a dynamic situation and we will strive to keep you informed as more information becomes available. Your local Program Manager or Inside Sales contact will have the latest information on any parts potentially impacted.

Best regards,

Megan Rios
